

San Bernardino Associated Governments	<b>Policy</b>	<b>34002</b>
Adopted by the Board of Directors April 3, 1991	Revised	New 4/3/91
<b>Measure I Allocation Formula Policies</b>	Revision No.	0

1. As stipulated in Measure I, Department of Finance official population estimates for the cities and County of San Bernardino will be used to annually calculate the disbursement of revenues. The County Planning Department will annually estimate the unincorporated population by subarea, reconciling with the Department of Finance county-wide unincorporated population total.

2. In the case of newly incorporated cities, distribution of Measure I revenues will be calculated beginning with the sales tax allocation quarter immediately following the date of incorporation. The initial population for newly incorporated cities will be three times registered voters as calculated by the Registrar of Voters on the date of the incorporation election. The three times registered voters population will be used only for that period from the date of incorporation until the first Department of Finance official population estimate, whereupon the general procedure will apply.

3. Each year upon the release of the Department of Finance official population estimates for the cities and County of San Bernardino, the formula for disbursement of Measure I revenues will be modified and corrected retroactive to January 1.

4. Point of generation percentages will be developed using Board of Equalization data from Bradley-Burns Local Sales and Use Tax. SANBAG is utilizing the services of Hinderliter, de Llamas and Associates to apportion the data by subarea.

5. Point of generation percentages will be applied quarterly and corrected retroactively to the appropriate collection period.
